

Hard Cap Ceiling Enclosure Installation Instructions for Cisco, Aruba and Meraki APs

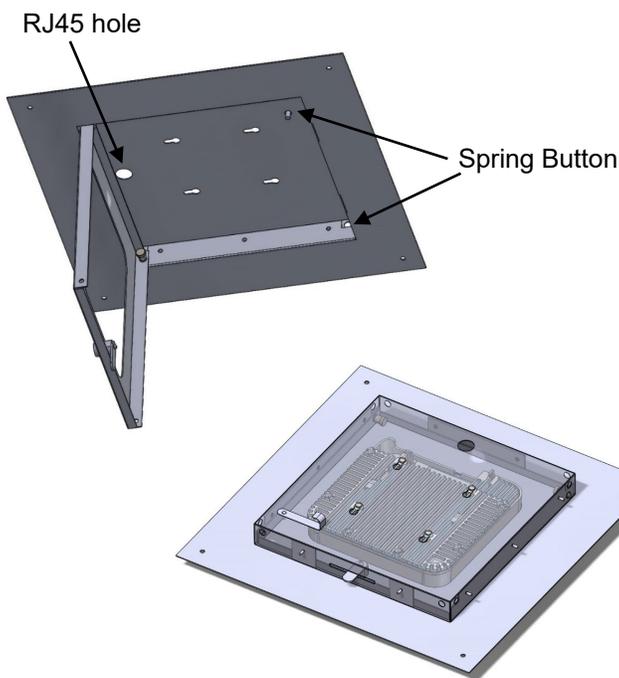

- 1) The enclosure has ¼” holes qty 4 spaced on 16” centers as shown. Center the holes with the studs in the ceiling. (AP not included)
- 2) Cut a 14” x14” square hole into the ceiling to allow the enclosure to be recessed into the ceiling.
- 3) Slide the enclosure into the hole and secure to the ceiling with the appropriate hardware for the type of installation you are performing. For studs, use #12 x 1.5” wood screws. If mounting to other materials use the correct wall anchors to support the enclosure plus the weight of the AP of approximately 5 lbs.

Cisco only base

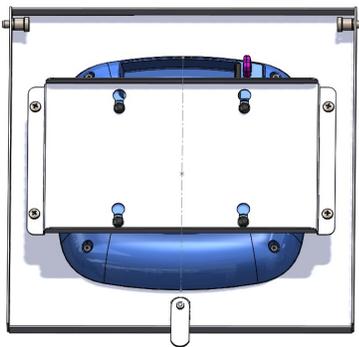

Standard base

Cisco 3800 Installs

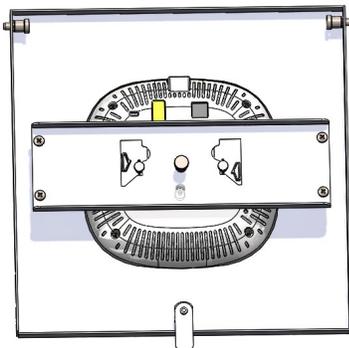

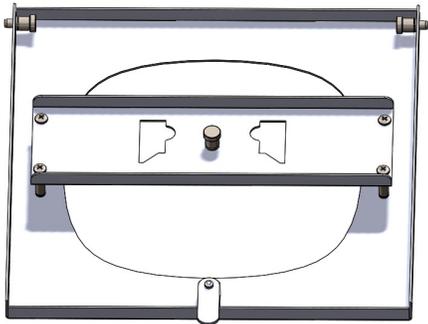

- 4) Unlock the door and allow it to swing open and hang.
- 5) Run the RJ45 cable into the large hole in the tray of the enclosure and secure the wire with the romex connector.
- 6) Slide the AP feet into the keyholes. This will require you to depress the spring button with the AP. After sliding the AP into place the spring button will secure the AP from sliding out. The AP cutout with ports must face the cable hole as shown.
- 7) Close the door and lock.
- 8) To remove the AP press the spring button up and slide the AP out of the key holes.
